

EventForge Knowledge Base

EventForge Knowledge Guide

This document is the static half of the EventForge AI knowledge base. It is

exported to guide.pdf (run node backend/knowledge/build-pdf.mjs). The dynamic half is retrieved live from the database, scoped to the asking user

organizers see their own events, attendees see published events plus their own

registrations, admins see everything.

What is EventForge

EventForge is a corporate event and conference management platform. Companies

and event agencies plan conferences, workshops, exhibitions, and corporate

events: event creation, venues, speakers, sessions, sponsors, registrations,

tickets, staff assignments, and attendee communication. The app has three

main surfaces: the landing page (public event calendar), the organizer workspace (/organizer, dashboard plus seven management tabs), and the attendee space (/attendee, event discovery plus ticket wallet).

Roles

" Platform Admin: manages organizations, subscription settings, users, and

global policies. Sees all data across every organizer.

" Event Organizer: creates events and manages venues, sessions, speakers,

sponsors, tickets, and event operations. Sees only their own events.

" Event Staff: handles check-in, session attendance, venue operations, and

attendee support. Sees the events they are assigned to.

" Speaker: manages speaker profile, sessions, presentation material, and availability.

" Attendee: registers for events, selects sessions, manages tickets, and provides feedback. Sees published events.

" Sponsor: manages sponsorship packages, brand assets, and assigned deliverables.

Accounts and sign-in

Open the Auth page from "Organizer sign in" (organizer role) or "My

tickets"

(attendee role) in the landing nav. Pick the Attendee or Organizer tab, then

either create an account (Full name, Work email, Password with a show/hide

eye toggle) or sign in (email plus password). After sign-in, organizers, admins, and staff land on /organizer, everyone else on /attendee. If you started from a specific event ("Sign in to continue to <event>"), booking

continues after login. Pages are guarded by role: visiting a page your role

cannot use redirects you back. Signing out (sidebar Log out) clears the session and returns to the landing page. The header and sidebar always show

the currently signed-in account if you see another user's name, sign out

fully and sign back in.

Landing page

The public home has a nav (logo back to top, "My tickets" to attendee sign-in, "Organizer sign in" to organizer sign-in), a hero with the headline

"Ideas are better together" and two actions ("Explore events" scrolls to the

event calendar, "View my tickets" goes to attendee sign-in), then "The event

calendar" grid of published events. Each event card shows the date badge,

type pill, title, description, venue and city (or "Online experience"), and

topics; clicking a card asks you to sign in and then continues to booking.

Below are three value props (curated experiences, simple ticketing, thoughtful recommendations). If events fail to load you see "We couldn't load events" with a "Try again" button; with no published events the calendar

says "No events yet."

Organizer sidebar and header

The organizer workspace has a left sidebar (hamburger drawer on mobile) with

three groups: Event management (Overview, Events with a count badge, Attendees, Tickets), Operations (Sessions, Venues, Speakers, Sponsors), and

Intelligence (AI Copilot with a BETA pill, which opens the copilot panel).

Below are Help center (opens the help modal), Log out, and your user card

(initials, name, role). The top bar shows the EventForge : Overview breadcrumb, a "Generate report" button (confirms with a toast), a "Search EventForge" box that live-filters the Upcoming events list by title, a bell that opens the Notifications panel with live data (items needing attention, tickets sold this month with change, next event countdown), and a "New event" button that jumps to the Events tab. On mobile the search icon opens a command palette with quick actions (create event, open check-in, ask AI to draft) and a backdrop click or the X closes it.

Organizer overview dashboard

The greeting shows today's real date and a time-aware greeting (morning, afternoon, evening) with your first name, plus an "All systems operational" indicator. Four live sections follow. "Your next big thing" spotlights your nearest upcoming event (title, countdown pill in days, date, registered count, venue and city) with a circular arrow button that opens the Featured event details modal (live title, date, venue, attendance versus capacity, session count, first run-of-show entries, and an "Open session plan" button to the Sessions tab). "Registration velocity" shows tickets sold this month, an up/down percent pill versus the prior 30 days, and a 14-day daily bar chart with first/last day labels. "Upcoming events" lists your events with a total-count pill: each row shows day/month, title, status badge, location and capacity, and a readiness bar; clicking a row selects it as copilot context with a toast. The Filter button reveals sorting (All events, Highest readiness, Soonest date, Reset sort); "View all" expands from 3 to 5 rows and "Collapse" shrinks back. "Next on the run of show" lists upcoming sessions with times, rooms, and types; clicking a session selects it with a toast. Any section that fails shows its own error with a Retry button; zeros with empty states mean genuinely no data yet.

Events tab

Create events with the Add event button: name, start date, and venue.

The

event is created immediately as a private draft invisible to attendees.

Set status to published and visibility to public and the event

appears on the landing page and in the attendee space. Use the search box to

find events by name. Each event card shows status, attention items, and last

updated time, all computed live.

Attendees tab: search, filter, approve

Open the Attendees tab ("Attendee directory"), then first pick an event using

the Event pills the directory is per event and lists nothing until an event

is chosen. Then you can type a name in the Search attendees box (matches first or last name), filter by ticket type with the Ticket pills (All tickets

or one type), and toggle Earliest booking versus Latest booking sort order.

Each row shows name, email and organization, status pill, ticket type, and

booking date. Pending rows carry working Approve and Reject buttons: approving confirms the seat (ticket quantity updates, check-in unlocks), rejecting frees the request. A success banner confirms each action. If no

rows match you see "No attendees match these filters" loosen the search or

pick All tickets; with no event picked you see "Choose an event above."

The plus button opens Add attendee (name, email, event, ticket type), which

registers them immediately.

Approving registrations

New registrations arrive as pending. Approve or reject them with the row buttons on the Attendees tab (organizer, staff, or admin) or review the pending count on the Tickets tab Approvals card. Approving confirms the seat

and decrements remaining ticket quantity; rejecting frees the request without

consuming capacity. Pending and waitlisted registrations cannot check in until approved.

Tickets tab

Ticket operations are managed one event at a time: pick the event from

the dropdown. The top cards show Capacity (seats configured), Sold (tickets issued), and Waitlist (people waiting), plus the percent full. Below, each ticket type lists price and remaining quantity. Create types with Add ticket type (name, price, total quantity, sales start and end dates). Three shortcut cards show Approvals (pending count), Waitlist, and Capacity percent full.

Sessions tab

"Sessions by event": pick the event from the dropdown to see its schedule every session with start time, title, room, and assigned speaker (or type / "Speaker TBA"). "Add session" starts a new session draft for the event; clicking a session row opens it for editing. Sessions carry title, room, start/end time, type (Talk, Workshop, Keynote, Panel), capacity, and speakers. Creating or moving a session into an overlapping slot of the same event fails with a 409 conflict listing the colliding sessions. Sessions with no speakers are flagged under Attention on your dashboard.

Venues tab

"Venue by event": pick the event, then type or pick the assigned venue and press "Save venue" the saved venue shows under "Saved for this event." Below is the venue directory (name, city/country or "Location TBA", capacity, Virtual or On-site badge). Venues hold rooms and capacities; the event's sessions reference its rooms.

Speakers tab

"Speakers by session": pick the event to see each session with its time and room plus a "Type speaker name" box typing assigns that speaker to the session (confirmed on blur with a toast). Each speaker record has name, email, title, bio, and one event. A speaker in two overlapping sessions is double-booked ask the copilot to spot that. Use the tab search box to find speakers by name.

Sponsors tab

"Sponsors by event": pick the event to see the sponsor count, grid, and an

"Add sponsor" row (type the sponsor name, press Add). Each sponsor shows its

initial avatar and company name. Sponsors carry a package (tier, price, benefits), brand assets, and deliverables; allocate a package when they sign

and mark each deliverable (logo placement, booth, mention) done as delivered.

Announcements

Organizers and staff can post announcements per event (schedule changes, room

moves, welcome notes); attendees see them in the context of the events they

registered for. Announcements support create, edit, and delete.

Check-in on event day

Check-in is QR based. Each approved registration carries a QR code (format

EF-XXX-N000) shown in the attendee wallet. Staff enter or scan the code at

the door: only approved or completed registrations succeed. Scanning an already checked-in code returns a 409 conflict; pending or waitlisted codes

are refused with a 403 until approved. A validate-only lookup previews a code without marking attendance.

Attendee space

The attendee home ("Find your next yes") has a ticket-wallet summary card

("No tickets yet" or "N saved ticket(s)") with a "Book a ticket" button that

scrolls to the event grid, an "AI-powered picks" recommendations section ("Ask AI for more picks" opens the recommender; suggestion cards show title,

tag, location, dates, topics, and "Ticket saved" or "Open registration"),

and the event grid (one card per published event with date, type, location,

description, topics). Each card has a "Book <title>" button (single click

books the first available ticket type: shows "Booking" then "Booked" and

disables) and a "View details" link to that event's page. Booking without an

account asks you to sign in first (continuing afterward); sold-out events add you to the waitlist with a position; duplicate bookings are blocked with "You're already registered." Skeleton cards show while loading, "We couldn't load events / Try again" on failure, and "No events found" when empty.

Booking, tickets, wallet, coupons

Booking is one click per event and always uses the first available ticket type with remaining quantity. Your registrations live in the ticket wallet with their QR codes show the code at the door for check-in. Coupon codes beginning with EVT give a 10 percent mock discount; invalid or expired codes are rejected with a 400 and no discount. Cancelling a registration restores its ticket quantity automatically. If a ticket type is sold out you join the waitlist and receive a position number.

Registration states

pending (needs approval), approved, rejected, waitlisted (with position), cancelled, completed, refunded. A duplicate registration for the same event and email is rejected with a 409 error. Cancelling restores the ticket quantity automatically.

Session scheduling rules

Sessions belong to exactly one event with a start and end time. Creating or moving a session into an overlapping slot of the same event fails with a 409 conflict listing the colliding sessions. Keep every session assigned to a named room and at least one speaker to stay off the Attention list.

Error messages explained

" 400: invalid input a required field is missing or malformed (date, email, quantity). Fix the highlighted field and retry.
" 401: not signed in sign in again; your session may have expired.
" 403: not allowed your role cannot do this (checking in a pending

registration, editing another organizer's event, self-registering as admin).

" 404: not found the event, session, ticket, or attendee does not exist or is outside your scope.

" 409: conflict duplicate registration, overlapping session, sold-out ticket moved to waitlist, or an already-used QR code.

" "Could not load data / Retry" (and per-card variants like "Could not load analytics", "We couldn't load events"): the server could not be reached. Check the app is running and press Retry.

AI Copilot

The floating copilot panel (bottom-right, expandable, closable, remembers your conversation) has three tabs. "Ask EventForge" answers questions about the product and your own live data events, registrations, tickets, sessions, check-in, analytics using retrieval over this guide plus live records scoped to you, composed into a direct answer with named sources. "Draft content" (Generate) writes event descriptions, speaker bios, announcements, and session summaries. "Recommendations" (attendee mode) suggests sessions from your interests. Quick-action chips per tab send instantly ("How do I publish?", "Draft event description", "Beginner-friendly picks", and more); or type anything and press Enter. Organizers open it from the sidebar AI Copilot entry (it receives the currently selected event as context); attendees via "Ask AI for more picks". If the AI service is slow or unreachable it falls back to on-device drafts with a notice. It knows every workflow in this guide and your current records including events you just created. If it cannot find an answer, it says so and suggests what to ask.

Help center

The sidebar Help center opens a support modal: email support (support@eventforge.app), phone (+1 (800) 555-0184), and three expandable FAQs (creating an event, managing ticket capacity, waitlists). Close with the X or backdrop click.

Analytics

The organizer overview shows registration velocity (tickets sold this month with change versus the prior 30 days and a 14-day daily chart), the next big event with days remaining and venue, the run of show (upcoming sessions), and organization health: status, items needing attention (pending approvals, sessions missing speakers, waitlisted attendees), and last updated time.

FAQ

" How do I create an event? Sidebar Events (or top-bar New event), Add event

(name, start date, venue) it saves as a private draft, then publish it.

" How do I add an attendee manually? Attendees tab, plus button: name, email, event, ticket type.

" How do I publish my event so attendees can find it? Set status to published and visibility to public. Draft or private events stay hidden.

" How do I search or filter attendee registrations? Attendees tab, pick the

event first, then Search attendees, Ticket pills, or Earliest/Latest order.

" How do I filter or sort my upcoming events? On the overview, press Filter:

All events, Highest readiness, Soonest date, or Reset sort. "View all" shows 5 instead of 3; Collapse shrinks back. Top-bar search filters by title too.

" How do I see full details of my next event? Press the circular arrow on

"Your next big thing" for the Featured event modal (attendance, sessions, session-plan link).

" Why is the attendee list empty? No event selected, or no registrations

pick an event with the Event pills first.

" How do I approve a registration? Use the Approve button on its pending row

in the Attendees tab (Reject to decline).

" How do I add a session? Sessions tab, pick the event, Add session (title, room, times, type, speakers).

" Why did my session fail with 409? Its time overlaps another session of the same event. Change the time.

" How do I assign a speaker? Speakers tab, pick the event, type the name in

the session's box.

" How do I add a sponsor? Sponsors tab, pick the event, type the name, Add sponsor.

" How do I set my event's venue? Venues tab, pick the event, type or pick the venue, Save venue.

" How do I check in attendees? Enter or scan each registration's QR code at the door; only approved registrations succeed.

" Why is check-in refused? Must be approved first; pending/waitlisted codes get 403, reused codes 409.

" How do attendees join a waitlist? Automatically when a ticket type sells out, with a position number.

" How do I book as an attendee? Attendee space, press "Book <event>" (first available ticket type); " Booked" confirms. Sign in first if asked.

" How do coupon codes work? Codes starting with EVT apply a 10 percent mock discount at booking time.

" How do I manage ticket capacity? Tickets tab, select the event, adjust ticket type limits; counts update live.

" Is a speaker double-booked? Ask the copilot it compares session times per speaker and reports overlaps.

" How do I post an announcement? The announcements section of your event; its attendees will see it.

" What do the notifications show? Live attention items, this month's ticket count with change, and your next-event countdown.

" How do I export a report? Press "Generate report" in the top bar (or the download icon on the velocity card) to download a CSV with per-event capacity, registrations, approvals, waitlist, and session counts.

" What if I open a page that doesn't exist? A styled 404 page ("Lost in the venue") offers Back to home and the organizer dashboard.

" Can attendees see my event? Only when published and public.

" What does 409 mean? Conflict: duplicate registration, overlapping session, or reused QR code.

" What does 403 mean? Your role is not allowed to do that action.

" Why do I see someone else's name? You are signed in as them sign out and sign back in.

" What can the AI copilot answer? Anything in this guide plus your live data:

events, registrations, tickets, sessions, check-in, analytics.
